

DXB Version 1.0.090 Beta Release Notes – 09/07/04

Changes/Fixes since version 1.0.088 Beta:

1. Virtual encoder graphics updated to match corresponding value on potentiometer
2. Mix Editor reaction time and refresh rate improved
3. Attached keyboards (USB or PS/2) will function normally in all text fields
4. Channel select in Mix Editor matches hardware select buttons, and vice versa
5. VST plug-ins now will “reset” to the factory default state
6. EQ on/off function now active for automation purposes
7. A “Clear Plug-in Automation” function has been added to File Menu
8. Memory Read Alert Message during shutdown sequence resolved
9. MIDI Map feature now has separate, user-selectable MIDI port assignment
10. Auto-Scrolling in Mix Editor now functioning to specification
11. I/O panel graphic for Digital I/O Card now matches silkscreen
12. Touching any of the four (4) EQ nodes now activates that corresponding band filter
13. Digital Performer overlay text correction – “Save” is now “Slave”
14. EQ/Dynamics Reset Commands carries through a linked pair
15. EQ Graphic display scaling/measurement now matches value of potentiometer
16. Implementation of new “Software Installer” feature that runs any executable (.exe) file either attached via USB (CD or Flash drives) or from the internal hard drive.

DXB Version 1.0.088 Beta Release Notes – 08/26/04

Installation Notes:

This update is a two-part installation procedure which includes a software update and a system update. It is very important that these updates be installed in the appropriate order. First, go to Install Packages in the dXb File Menu and install the software update to v1.0.088. Second, return to Install Packages and install System Update 1.0.01. The dXb will reboot upon completion of the updates.
