

RELEASE NOTES

MACKIE TT24 SOFTWARE UPDATE • MAY 19, 2005

Version 1.3
Build 60

These release notes describe changes and upgrades that have been made in the TT24 software since Version 1.2 Build 56.

MANUALS

The TT24 Quick-Start Guide and TT24 Owner's Manual are posted on the web site as PDF downloads. Adobe Acrobat Reader is available from Adobe's web site to read the PDF documents.

SOFTWARE INSTALLATION

New software releases can be downloaded from Mackie's web site by going to the TT24 Product section and clicking "Downloads." Installation instructions can also be downloaded there. If you don't know the software version you are currently using, you can check your software version and build number by pressing the "HELP" button on the console, or by clicking Menu > About in the TT Control PC application.

Please download the following files to update your TT24:

1. TT Firmware Upgrade (1.3 Build 60)
2. TT Firmware Upgrade Instructions
3. TT Control PC App (1.3 Build 60)
4. TT Control Installation Instructions

RELEASE NOTES FOR VERSION 1.3 BUILD 60

FEATURE UPGRADES SINCE VERSION 1.2 BUILD 56

- New compressor/gate processors.
These new algorithms allow for faster attack times on the compressor and gate.
- Noise suppression.
New low-level noise gates reduce the noise floor by eliminating noise from unused channels. A master threshold control resides in the new TT Control PC application under the Setup > Operation menu (the range is -70 dB to -50 dB).
- Card slot support enabled.
The card slots are now fully functional. The UFXII DSP expansion card is currently available with more expansion cards available soon.

MACKIE.
